Justi® High-Impact Denture Base PMMA Discs

Justi High-Impact Denture Base PMMA Discs

are intended for use in milling full and partial denture prosthetic appliances. Justi Discs are available in 98.5mm diameter to fit most open type, 5-axis milling machines. Discs are available in three heights, 20mm, 25mm, and 30mm and are available in four shades, light pink, light red pink, dark pink, and regular original.

“Outstanding aesthetics and excellent functionality.”

- Available in 19 of the newest Vita® type shades, including 3 bleached
- Available in 24 upper and 9 lower anterior molds, 17 upper and 17 lower posterior molds,
- Made in the U.S.A. backed by over 150 years of experience

See page 10-11 for specials

Justi® Bonding/Repair Material

- Universal type bonding/repair material
- Self-curing bonding/repair methyl methacrylate
- Cross-link and internally pigmented to give a dense even texture
- Available in 3 shades of powder: regular pink, regular fiber pink and clear

We recommend using the Justi Bonding/Repair Material as it is compatible with the Justi Denture Base PMMA Discs and Justi Imperial ViVO Denture Teeth

See page 24 for pricing & specials

A complete system that can't be beat

Justi Imperial ViVO Digital Denture System: by using Justi's denture material together, Justi produces the best possible final appliance. Justi's Dentue Base PMMA Disc and Justi Imperial ViVO are bonded together using Justi Repair Material provides a dense even texture to the denture teeth.

Flexible Clear Disc For Invisible Partial Denture

The Flexible Disc is intended for aesthetically superior semi-flexible removable partial denture frameworks, which blend perfectly with the patient's gums, providing better function, aesthetics, comfort, and durability.

Benefits for Labs:

- 100% digital for accurate fit
- Eliminates RPD in the wax-up stage, investing, in casting and finishing.
- Fast, Clean, precise, and cost-effective
- Easy finishing and polishing with minimal effort
- Mill with the same procedure with PMMA, both wet and dry mill

Indications:

Transparent partial denture frameworks, night guards, clasps, and other dental appliances processed by CAD/CAM milling machines for lightweight, aesthetic non-metallic restorations.

Benefits to Patients:

- Lightweight, durable and precise
- Comfortable and easy adaptation in the mouth
- Bio-compatible and non-allergenic
- Clasps are flexible and tooth-bearing, virtually unbreakable.
- Occlusal rest reduce tissue-borne pressure to reduce sore spot and offer excellent retention

Single Teeth

For added savings, laboratories can purchase uncarded single teeth. Minimum quantity is 500 teeth per order. Please allow ten days delivery time for orders of single teeth.

GROUP/ITEM #	DESCRIPTION	
081-19973-1	Dymon-Hue HPT Anterior	\$1.67
081-19974-1	Dymon-Hue HPT Posterior	\$1.24

Justi® Dymon-Hue® Hardened Plastic Tooth line now includes Extra Large Anterior Mold #268.

DYMON-HUE HPT teeth are manufactured with life-like aesthetics that are blended to be similar to those of natural teeth.

Dymon-Hue HPT (hardened plastic teeth) are made of high quality synthetic resin. They are wear resistant, cross-linked, vacuum processed, and have superior hardness. The cross-linking system used is an interpenetrated, multi-layered, intersectional polymer network that is solvent and heat resistant. The pigmented copolymer incorporates inorganic type pigments that are color stable and unaffected by light or heat. The denture base side of the tooth extending to the neck portion is constructed of a solvent-resistant, softer polymer that assures a 100% chemical bond to all methyl methacrylate denture base acrylics. No diatoric retention is necessary.

Dymon-Hue HPT teeth are available in 35 anterior molds, and 40 posterior molds including 0° Planatomical™, 10° Symmetry™, 20° Semi Anatomical, and 33° Anatomical and Short-Bite. They are also available in anatomical short bite molds that provide the technician additional space, eliminating tooth adjustments in many cases.

The Dymon-Hue HPT is another quality Justi® product manufactured to surpass ANSI/ADA Specification #15 for synthetic resin teeth; it also complies with ISO # 22112:2005.

Justi®, the professional's choice for hardened plastic teeth, celebrates over 158 years in the dental industry!

"Outstanding aesthetics and excellent functionality."

Imperial VIVO®

Justi ImperialViVO® offers an incisal and interproximal blend that give this beautiful line of teeth the unique ability to absorb and reflect surrounding color. This means more latitude for blending with natural teeth resulting in less resets due to shade, especially in partial denture cases.

Justi ImperialViVO® offers traditional quality American molds using the newest Vita shade system. The effect of this combination is outstanding aesthetics and excellent functionality.

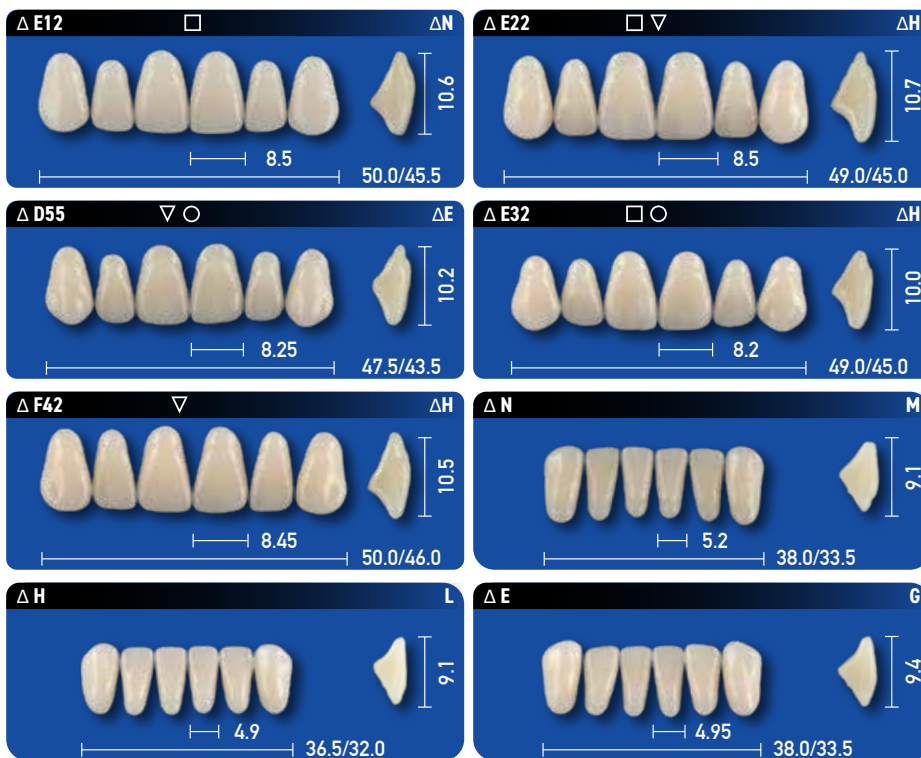

The ability of the teeth to blend into the adjacent dentition has made producing great-looking stay plates much more predictable.

The chameleon-like characteristics of Justi ImperialViVO® teeth make shade selection much easier and greatly reduces remakes. The traditional American molds have a very natural look to them.

Imperial ViVO® teeth are suited for:

- Full dentures
- Implant prosthetics
- Telescope and cone constructions
- Attachment dentures
- Model cast prosthesis
- Interim solutions

Delta Δ - The Next Highest Quality Generation of Imperial ViVO Molds

Justi® Blend MAIN FEATURES

The structure of Justi Blend® anterior hardened plastic teeth creates the vitality of natural teeth. The centrals, laterals and cuspids are manufactured with the same HUE, but each type has a different VALUE. It is this combination of tones blended together in one set that gives that natural look and natural characterizations.

The semi-translucent body creates the look of depth within the tooth and reflects color from within, as dentine does in a natural tooth.

The Justi Blend® Posterior visually matches as closely as possible the cuspids, left and right. It does not match the value of the centrals or the lateral teeth. It is manufactured with the same HUE but has different VALUES or TONES. Following the studies of U.S. universities, it was concluded that natural posteriors are slightly darker than the centrals and laterals. American Tooth Industries is following this characteristic.

**SPECIAL FEMALE & MALE MOLDS
ABSOLUTELY UNIQUE!**

Triplex™ MSLV

The European Look in Vita type of shades

The Triplex™ MSLV is a unique system of multi-layered intersectional polymer network resin denture teeth. The Triplex System features the natural-looking characterization found in European manufactured female and male anteriors, along with the full range of anatomical occlusion in the posteriors required by modern dental professionals in the USA. The Triplex System is a unique line of teeth for modern users in over-denture cases or partial cases where high characterization is needed. It is also the only tooth line in the world market to offer male and female anterior maxillary and mandibular molds for very exclusive premium full dentures.

Delta Δ ™ Anatomic Posterior Teeth

These anatomically pleasing 10° posterior teeth are suitable for complete and removable partial dentures. Their carved cusps are very similar in shape to Dentsply Anatoline® teeth. The tooth aesthetics and functionality are complementary with excellent chewing efficiency. This 10° tooth can be used in lingual occlusion configurations or in applications where gentle excursions can offer the patient proper mastication.

Imperial Delta Δ ™ teeth are available in four sizes, Δ 30X, Δ 32X, Δ 34X and Δ 36X, in all 22 Imperial shades and all 19 Imperial ViVO shades with highly cross-linked intersectional polymer network material with these attributes: maximum wear resistance, vacuum processed, no diatoric retention is necessary, and 100% bondability with methacrylate denture base material.

Justi® Imperial Block Teeth

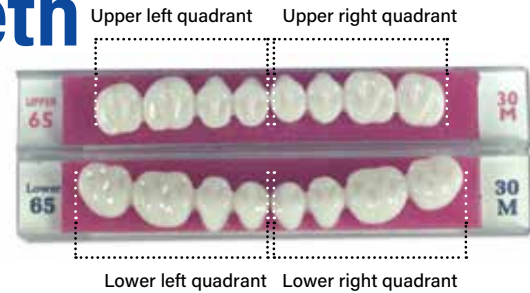

BLOCK TEETH SPECIAL

Made from highly cross-linked blended acrylic material, these block teeth are four posterior teeth joined together on a flat plane. The 0° degree teeth are a time-saving factor in articulation and mounting of the blocks in a denture wax-up. The cusplless carvings eliminate much of the lateral stress during use. Available in Imperial shades 20, 25, 45, 59, 62, 65, 66, 67, 69 and 77, and Bleached shades 17, 18, 19, 21 & Vita Shades. In upper and lower mold 30M only.

Justi® BlockCutter™

Hard Copolymer, No Metal!

The process used to control the tooth shading for BlockCutter teeth has been improved. The shade of the bladed mandibulars is now a higher quality match for the maxillary block teeth.

This new block teeth design allows for very fast setups and enhances the power of a removable denture to more efficiently perform mastication with minimal effort. This increased chewing efficiency is done without undue wear on the opposite maxillary plastic teeth.

COMES IN 22 IMPERIAL® AND 7 POPULAR VITA® SHADES: A1-A2-A3-A3.5-A4-B2-B3

*Vita Shades is not a trademark of American Tooth Industries.

Try Justi® Mastix™

Allows the Perfect Mastication

Hard Copolymer No Metal!

Mastix allows the perfect mastication by the cutting shape of the maxillary bicuspid, the first and second molars, left and right. The cusps are positioned to allow an effective lingualized occlusion, making this arrangement the most powerful for the edentulous patient. This design ensures comfort, functional performance, and aesthetic values without undue wear on the opposing plastic teeth.

COMES IN 22 IMPERIAL® AND 7 POPULAR VITA® SHADES: A1-A2-A3-A3.5-A4-B2-B3

Bambino® Teeth

**SPECIAL
Get 10
Mix & Match
\$10.65 A Card**

The Bambino tooth is an aesthetic and functional solution to the problem of the empty spaces left by deciduous teeth.

Made of a copolymer cross-linked resin, this tooth line guarantees impermeability to infiltration of fluids and bacteria, thus preventing discoloration and changing of dimensional character. Studied and developed by orthodontic specialists as a

simplified alternative to orthodontic appliances, these teeth are ideal for use as a space maintainer to ensure a correct line of teeth where both articulation and aesthetic are concerned. Use of these teeth in articular rehabilitations allows for proper mastication, which can only be obtained with perfect articular balance. Available in a single-mold upper and lower anteriors and upper and lower posteriors. Mounted on dark plastic blocks in 2 shades: 59 (milk white), 61 (yellow-straw white).

SPECIAL PROMOTION

Justi is your only source in the world for

Imperial® Flatback Plastic Slotted Facings

Justi Imperial Facings are made of the same wear-resistant formula as our Justi Imperial tooth line. The facings are available in a selection of Imperial shades and are pigmented to match the shade guide when used with a standard metallic backing.

The Advantages of Plastic Facings are:

1. Freedom from breakage. Will not chip or fracture while being ground in. Will not break in normal mouth service.
2. Elimination of glazing after grinding to tissue adaptation. Polishing restores the surface so that it is well tolerated by mucosa. Porcelain must be reglazed to prevent irritation.

3. Adaptability. They may be easily ground to any shape, recarved on the labial or characterized. In case of extreme resorption, pink material may be added to the gums with a pleasing effect.
4. Superior Aesthetic. Distinctive anatomy and fidelity of shade. Justi Imperial Facings may be ground to any shape and can be characterized or recarved on the labial to match adjoining teeth. A preformed plastic backing is available and can be easily modified.

Justi® Hardened Plastic Teeth comply with ANSI/ADA Specification #15 Published in 2008, identical adoption of ISO Standard #22112:2017

Available in small, medium and large anterior tooth sizes

Single Teeth Available

Justi Tooth Trays and Cabinets are an ideal storage and inventory system for Justi Teeth. Cabinets are available in three sizes.

- Large will hold up to 4,576 combination Justi anterior and/or posterior tooth cards
- Medium will hold 1,512 anterior and/or posterior cards
- Small has a capacity of 210 to 360 cards of anteriors and/or posteriors

The large counter cabinet does not require inserts. Individual tooth drawer trays contain inventory strips to write the card brand, shade and mold information on, which simplifies reorders. Justi's tray inserts also fit a standard Dentsply 16 1/2" x 16 7/16" metal tray, which minimizes brand conversion costs.

Acrylic Materials for prosthetic use

Justi® Denture Base Materials

High Impact for Traditional and Microwave Technique

A high-grade methacrylate polymer combined with a cross-linked, solvent-resistant monomer has advantages not found in ordinary denture base materials. It has a short setting and long working time. It is hard, dense and structurally strong, having good model adaptation and high color fidelity. The high-quality cross-linked monomer prevents crazing from solvents such as ether, alcohol, monomer and acetone, etc. This material will bond with any of Justi's tooth lines.

Justi® Tray Material

A self-curing-type acrylic for construction of precision custom trays and stabilized occlusal bite rims. Justi Tray Material is a coarse-type powder that has a high degree of elasticity with a moderate curing time to allow ample working time. After the initial dough stage, the material can be manipulated without sticking to the hands. Having a dead pack, it can be adapted to the model without any significant shrinkage after the cure. The surface roughness aids in the retention of the impression material.

Justi® Frame Base Material

Justi Frame Base Material is a specially formulated microwave-type denture base material used in processing metal framework partial dentures. Can be rapidly cured in a microwave oven. This material can withstand higher heat curing than conventional acrylics. Used only for microwave curing with the Justi VIPI Microflask System. Available in two shades: regular fibered and dark fibered.

GROUP/ITEM #	DESCRIPTION	SPECIAL PRICE	
072-07-0001	Frame Base Regular Fibered -1 lb. Kit - (1 lb. powder, 8 oz. Micro-liquid)	\$72.16	\$52.49
072-07-0002	Frame Base Dark Fibered - 1 lb. Kit - (1 lb. powder, 8 oz. Micro-liquid)	\$72.16	\$52.49

Justi® Crown & Bridge Formula

An outstanding cross-linked polymethyl methacrylate resin to formulate crowns, bridges and inlays. It is a heat-cure method for permanent cases and long-term provisionals that is available in 17 different dentin shades: 20, 25, 30, 35, 40, 45, 50, 55, 60, 62, 65, 66, 67, 69, 70, 77 and 81. It also comes in two enamels: light incisal and grey incisal and a finishing transparent shade. Complete technique instructions are available on request.

Justi® Imperial Namilon

An internally pigmented, cross-linked methyl methacrylate resin for permanent crown and bridge restorations. It is ideal for quality, high-strength, long-term provisional cases such as implants and full-mouth reconstructions. Namilon is to be used with the crown and bridge investment procedures, i.e., wax-up, investment, boil-out and packing. Because Namilon is internally pigmented, it will not streak, bleed or change color. Namilon features an extended working time, and once polymerized in heat, it cures quickly. Restorations are durable, solvent and wear resistant.

Justi® Soft Denture Reliner Semi-Rigid, Soft and Very Soft, Heat Cure

An ethyl methacrylate-type material that can be heat cured traditionally or processed in the microwave oven within minutes when using the Justi Vipi Microflask system. This pink soft liner blends well with most denture base materials. It has a choice of three textures– semi-rigid, soft and very soft. The material is tissue tolerable and will improve mouth comfort from spiny ridges or other causes of chronic soreness. Doctors, technicians and patients will all be exceptionally pleased with this high-quality and long-lasting material.

**Pakto Pressure Pot 4 Quart
Item # 070-28-0020**

Justi® Pakto System “The Artesians and Ceramist’s Friend”

Same technique as is used with porcelains. The Justi Pakto® System is a high-quality resin-to-metal alternative to porcelain.

Justi Pakto is a crown and bridge resin material system designed to save time and labor while offering maximum physical properties to simulate the hardness of natural dentition. Justi Pakto is not a methyl methacrylate, a composite or a porcelain. It is 100% poly glycol dimethacrylate resin and is processed in a dry-heat pressurized chamber.

The areas of application are:

- A) Crown and bridge veneers;
- B) Facings on partial dentures and attachment frames;
- C) Inlays of all types;
- D) Maryland-type bridges; and
- E) Temporary crowns and bridges.

Justi Pakto can be used with any ADA-recommended metal with no color change or fractures. The opaque has superior masking qualities and chemically bonds to the tooth-shaded resin material.

Color verification can be done before the resin is cured since the shade is identical when cured. Justi Pakto is shaded to match the Vita-Lumin® Shade System. (Vita-Lumin is not a registered trademark of American Tooth Industries.)

The same tools used to process porcelain can be used for Justi Pakto. The Justi Pakto Curing System uses a 4-quart, dry-heat pressurized pot.

Replacement parts sold separately.

Justi® Temporary Crown & Bridge Resin

3 Shades - Light, Medium and Dark

An autopolymerizing self-cure powder and liquid resin for fabricating a crown, bridge or splint. It is very hard, color stable and easy to polish and comes in Light (shade 59), Medium (shade 62), and Dark (shade 69). This material has a low exothermic heat peak and therefore, is tolerable to the oral cavity; it does not burn.

		SPECIAL PRICE

Justi® Study Model Material

A methyl methacrylate self-curing material that can be poured into a silicone or rubber mold with a recommended technique that will duplicate the model in an off-white/cream color. It can be used for fabricating study model cases that emphasize the appliance rather than the model. This material can be used for many other applications where an off-white resin is needed with an autopolymerization system. Cure time is approximately 20 minutes in open air. Pressure pot technique is recommended for a more compact, dense model.

GROUP/ITEM #	DESCRIPTION		
072-13-0001	Study Model Kit (1 lb.) 1 lb. powder (450gr.) 8 oz. Liquid (240ml.)	\$69.67	\$48.51

072-13-0004	Study Model Liquid 8 oz. liquid (240ml.)	\$13.59	\$11.21

Justi® Opaquer

A resin opaquer for masking metal in veneer crowns with outstanding quality of adhesion. It is also very helpful in holding veneer color. Primarily used with Namilon or Justi Crown and Bridge Formula. However, it can also be used with other polymer-based crown and bridge materials. Brown and pink opaquer are used when experience shows they are needed.

		SPECIAL PRICE	
GROUP/ITEM #	DESCRIPTION

Justi® Resin Cement - Best Cement on the Market For Permanent Cementation

A unique copolymer offering greater adhesive properties and insolubility. Justi Resin Cement offers a lower film thickness and is radio-opaque.

Features:

- Shows adhesion to tooth structure superior to any other cement tested after 24 hours immersion in water.
- Meets the requirement for film thickness in ADA Specification #8, when used according to instructions.
- Available in 6 shades: Natural Yellow, Natural Gray, White, Pink, Brown and Clear.
- Insoluble in mouth fluids.
- As harmless to the pulp as present resin filling materials.
- Radio-opaque.

		SPECIAL PRICE	
GROUP/ITEM #	DESCRIPTION

Justi® Cold-Cure Ortho Resin

An autopolymerizing material primarily used in the construction of orthodontic appliances. The powder is clear and when used with the transparent liquid, will produce a clear base material. A pink liquid is also available, which when used with the clear powder, will produce a translucent pink base material. The powder is a low-flow polymer that absorbs the monomer rapidly. This prevents the material from slumping when using the liquid dropper technique.

You may re-sell
at \$20.75 per bottle

Renew is a Premium Denture Cleaner in a class of its own. Renew powder is a concentrated denture cleaner with a formulation much more powerful than effervescent denture tablets and powders currently on the market. This formulation allows for superior cleaning in a shorter period of time. Renew has professional strength denture cleaning and is backed by a money back guarantee. It cleans better than others, removing: tobacco, iron, plaque, coffee, calcium, calculus, tea, tarter and bacteria. Renew is sold in a generous 200 gram bottle, which provides 50 denture cleanings.

Each case has 50 free samples, making it easier for patients to try Renew free of charge.

JUSTI DENTURE BRUSH Essential Denture Cleaning...

Just like natural teeth, for optimal denture hygiene, denture brushing is essential. Daily brushing with the Justi Denture Brush is the safest, most effective way to keep a denture looking its best. Proper brushing makes a denture last longer and helps to keep the mouth clean and fresh. The design of the brush enables complete removal of deposits and food residues.

The rounded nylon bristle tips will not harm denture materials. The large ergonomic handle provides positive brush movement control for easy denture cleaning. For more thorough cleaning, combine brushing with periodic soaking in Renew Denture Cleaner.

Justi® Papilla Gauge

Denture Measuring Device

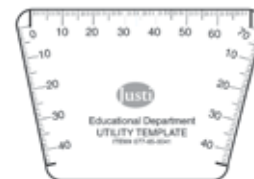

The permanent position of the papilla can provide great diagnostic value in reproducing tooth position in the construction of a denture. A measuring device that uses this landmark will record, with accuracy, the horizontal and vertical plane to define the position of the incisal edges and the central incisors. These measurements can be recorded, along with the mold and shade, on the patient's records for present or future application. For more information, please contact us.

ORMAPLUS LAB 70

Vinyl polysiloxane based, addition-curing material, exclusively designed for extra oral use in the dental laboratory.

TECHNICAL DATA

- Hardness (after 24h): 70 (±3) Shore-A.
- Recovery from deformation: 99,5%
- Mixing ratio: 1:1
- Linear dimensional change: - 0,05%
- Perfect compability with self and heat curing acrylic resins.
- High heat resistance without alterations.
- High precision in detail reproduction.

INTENDED USE

- Matrices for fixed and total prosthesis.
- Duplications.
- Prosthesis repair.
- Matrices for temporary crowns and bridges.
- CAD compatibility.

M4300	Ormaplus Lab 70 (0,75 kg Base + 0,75 kg Catalyst)	\$117.85
M4310	Ormaplus Lab 70 (5 kg Base + 5 kg Catalyst)	\$375.00

ORMAPLUS LAB 90

Vinyl polysiloxane based, addition-curing material, exclusively designed for extra oral use in the dental laboratory.

TECHNICAL DATA

- Hardness (after 24h): 90 (±3) Shore-A.
- Recovery from deformation: 99,5%
- Mixing ratio: 1:1
- Linear dimensional change: - 0,05%
- Perfect compability with self and heat curing acrylic resins.
- High heat resistance without alterations.
- High precision in detail reproduction.

INTENDED USE

- Matrices for fixed and total prosthesis.
- Duplications.
- Prosthesis repair.
- Matrices for temporary crowns and bridges.
- CAD compatibility.

ORMADENT PUTTY

Polysiloxane based, condensation-curing material for preliminary precision impressions. High consistency (putty).

TECHNICAL DATA

- Non-stick material.
- Very high compressive strength and recovery from deformation.
- Adequate total working time.

INTENDED USE

Ormament Putty, due to its excellent initial flowing and final rigidity, guarantees the best results for all impression techniques.

M1000	Ormament Putty	1500 g (900 ml)	\$64.58

M1092	Ormactivator Gel (60 ml)	\$33.97

ORMAPLUS PUTTY (Green and White)

Polyvinyl siloxane based, addition curing, elastomeric precision preliminary impression material. Final hardness: 60 Shore-A.

INTENDED USE

- Base and catalyst pastes mixing ease.
- Fast intraoral setting time (2'30) which is pleasant for patients.
- Perfect chemical bonding between putty and light bodied materials.
- High hydrophilicity and tear resistance.
- Easy disinfection without dimensional alterations.

- Permanent dimensional stability.
- Perfect compatibility with any kind of plaster (natural or synthetic).
- Possibility of casting the same impression several times.
- Odorless and tasteless material for a better patient's comfort.

TECHNICAL DATA

- Fast: Setting Time 4:00
- Regular: Setting Time 5:30

M3035	Ormapius Putty Fast setting: 600 ml / 1060 g (300 ml base paste + 300 ml hardener paste)	\$88.37

ORMADUPLO 22

Vinyl polysiloxane based, addition-curing duplicating material for laboratory use. Ormaduplo 22 performs high dimensional stability and an extraordinary precision in reproductions.

TECHNICAL DATA

- Castability: at least 3'
- Setting time (at 23°C): 15' max.
- Recovery from deformation: 99,95%
- Hardness: 22 Shore-A
- Mixing ratio (Base : Catalyst): 1:1
- Linear dimensional change: -0,05%

INTENDED USE

- Model duplications.

BASE PLATE WAX

Three options available:

Medium Soft: dependable wax that boils out clean, reasonably priced and polishes to a high shine.

Medium Hard: same as Medium Soft but formulated with higher melting waxes and is specifically designed for warmer climates.

All Season: designed to be used most anywhere a good quality, economy wax is needed. This wax boils out clean, polishes nicely, and is formulated to securely hold teeth.

AUTOCLAVABLE - IMMEDIATE CUSTOM TRAYS - REUSABLE 24 PIECES

Autoclavable

The Pozzi Super Tray system is designed to produce fine quality and accurate full dentures, and immediate denture impressions. With the Pozzi system, you no longer need to make a custom tray because Pozzi trays are custom trays—ready to use. These trays are easy to handle; you do not need to learn special techniques. You need only apply the procedures that you use with a lab-made custom tray.

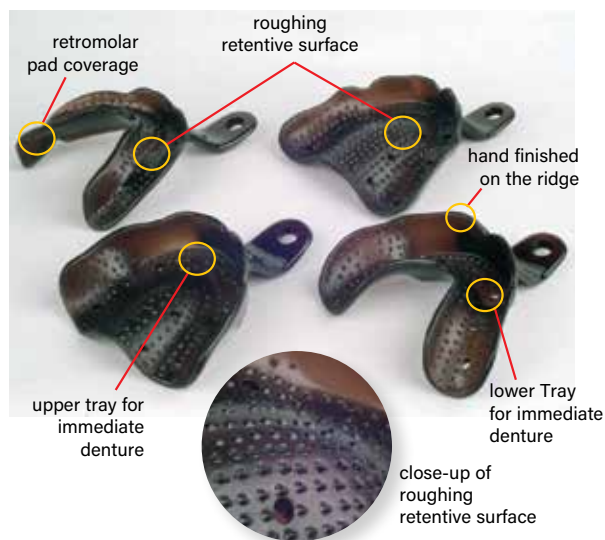

Advantages: (1) much more economical than a custom tray (save time and money). (2) Less expensive than disposable trays; these trays are reusable and can be sterilized. (3) Rough retentive surface excludes the use of adhesives. (4) Statistically selected system and packaged in an easy-to-choose kit.

Characteristics: (1) Designed to provide consistent retromolar pad coverage. This prevents errors in applying too much pressure to this area, which is extremely important for the final fitting of the prosthetic appliance. (2) Trays are exceptionally strong and rigid but lightweight and can be modified by trimming for special needs. (3) Can be used with any type of impression material. We suggest the use of silicones like our Major® Ormadent Putty and Ormaplus on page 38 and a very creamy alginate like our Major Alginmax on page 34. (4) Professionally designed with complete anatomic detail. (5) Hand finished.

Composition: Reusable transparent dark brown polycarbonate.

Technique: No particular technique is suggested. The Pozzi Super Tray System consists of accurate ready-made custom trays.

A caliper is available for measuring the distance between ridges in the patient's mouth or in existing dentures. It helps to expedite proper tray selection.

Pozzi® Guaranteed Standard Stainless Steel Trays

Perforated stainless steel impression trays—the most popular type. Retention is assured by holes over the whole surface of the tray. A rim on the back edge stops the escape of any material, which is most unpleasant for patients. An anatomical design with rounded comfortable rims especially for adaptation to the oral cavity with respect to frenum, jaw tuberosity and retromolar pads. The dimensions come from research in laboratories throughout the world and are able to cover any anatomical situation. This means more accurate and precise impressions.

CrystalCeram® Fluorescent Glaze Paste

This is the newest advancement in glazes from the largest U.S. manufacturer of stains and glazes for dental ceramics. Designed specifically for use with Zirconia and Lithium Silicates, CrystalCeram® Fluorescent Glaze Paste paints on clear and fires Crystal Clear to help create the most natural esthetic restorations.

GROUP/ITEM #	DESCRIPTION	
111-CCZFG5	CrystalCeram® Fluorescent Glaze Paste, 5g	\$50.00

Universal Fluorescent Glaze Paste

CGI Universal Fluorescent Glaze paste is intended for use in glazing all types of dental ceramic restorative materials, especially lithium disilicate, lithium silicate and zirconia restorations. The ideal level of fluorescence enhances the optical properties of the restoration to mimic the appearance of natural teeth under all lighting conditions. The paste permits easy application over the surface of the restoration and saves time during the preparation and application.

GROUP/ITEM #	DESCRIPTION	
111-CFLLFP	Universal Fluorescent Glaze Paste, 5g	\$45.00

Universal Glaze Paste

CGI Universal Glaze paste is intended for use in glazing all types of dental ceramic restorative materials. Its wide range of firing temperatures allows the technician to adjust to the firing of the specific ceramic to be glazed. The paste permits easy application over the surface of the restoration and saves time during the preparation and application.

GROUP/ITEM #	DESCRIPTION	
111-COGLFP	Universal Glaze Paste, 5g	\$33.00

Universal Glaze Powder

CGI Universal Low Glaze powder is intended for use in glazing all types of dental ceramic restorative materials. Its wide range of firing temperatures allows the technician to adjust to the firing of the specific ceramic to be glazed.

THE ORIGINAL
MASTERPIECE

By **Pozzi**

*Metal articulator that controls the correct occlusion with maximum precision.
No plaster or accessories are needed.*

GALETTI®

**Featuring Mechanical Fixation of Models
Precision Made - Original Type Patented**

The Galetti Articulator is solidly constructed of metal alloy casting. It is easy to use, allowing quick fixation of model from chairside to patient. For the dentist, orthodontist and oral surgeon, the Galetti Articulator creates an impressive display that is quick and easy to use for case presentations. It can also be used for study models, as well as for many additional applications for partial and full denture work.

Special Features

- All anatomical movements possible. Correct occlusion with maximum precision.
- Perfect occlusal-articular balance to prevent cuspidal interference and to obtain a balanced prosthetic appliance.
- Allows easy separation of upper and lower components to form two entirely stable working bases.
- Upper anterior ball-bearing joint allows for free motion of upper appliance to check occlusal-articulator balance.
- Hinge axis with bilateral motion capability for anterior, posterior and lateral movements showing working and balancing movements.
- Adjustable vertical angle pin table to raise or lower the bite.

PRECISION INSTRUMENT DO NOT BUY SUBSTITUTES

Magnett® Articulator

Features four basic movements: mastication, protrusive, right lateral and left lateral. The protrusive movement can be simulated by placing both thumbs on the upper cross member just inside the condular joints and simply pushing towards the back of the condular springs. To achieve right lateral movement press with the left thumb and to achieve left lateral movement, press with the right thumb against the cross member. Comes with 10 steel mounting plates.

Kura Curing Pot with Air Hose

The Justi-Kura™ Curing Pot has been designed to satisfy the need of the modern technician. It is sturdy, very practical, absolutely safe, and has a large capacity of 6 quarts. The assembling of the pot is done under strict quality control. The price is very competitive considering that it is made entirely of stainless steel. All parts are available individually.

The Justi-Kura™ Curing Pot is designed for curing Pozzi Ortho Resin, Justi Ortho Resin, and Justi Repair Material.

This system ensures a pourous-free cure. When powder and liquid application is complete, cover appliance with warm water in the pot, move the lid to the closed position and inject air 20 to 30 psi. Allow the resin to cure 15 minutes. Exhaust the air by pressing the pressure release valve until the safety lock drops completely. Open lid, remove appliance and allow to bench cool.

CHARACTERISTICS & ACCESSORIES

- The Justi-Kura Curing Pot - is sturdy, absolutely safe, very practical and has a large capacity of 6 quarts.
- Air Intake Valve - Admits compressed air. Valve must be firmly imbedded into the lid.
- Safety Relief Valve - Cuts in if the pressure is above the recommended psi and the pressure will be released.
- Pressure Release Valve -To open the pot, press the air release valve until the safety lock drops. Open the lid counterclockwise and lift up.
- Air Pressure Gauge -The pot is preset not to exceed 40 psi.
- Safety Lock - Small seal for pressure pot safety lock.
- Air Supply Hose -To inject compressed air into pot.

Pozzi Polymerization Flask

Our Microwave Flask is designed for use during microwave curing procedures. Pozzi's flask for microwave polymerization is made of a reinforced engineered plastic which guarantees excellent physical and mechanical properties.

Benefits

- Work faster
- Improve the process
- Save money
- Better dimensional stability
- High-temperature resistance
- 100% microwave compatible
- Safe to 2x exertion of pressure
- Plenty of space to work with total upper and lower cases
- Use any Justi microwable resin
- Cleaner than regular procedures

GROUP/ITEM #	DESCRIPTION	SPECIAL PRICE
001-67-0020	Pozzi Polymerization Flask	\$241.50

Microflask™

Justi is proud to introduce the industrial-strength, two-piece, Super Vipi STG Microflask to be used in the microwave irradiation technique for curing acrylic resins in the fabrication

of dental prostheses. This revolutionary microwave flask is constructed in 2 sections with 4 stainless steel bolts, sleeves and threads for tightening. Featuring:

2 Pieces

- Uniform curing of acrylic resins
- Rapid curing time (13 min)
- Complete curing of acrylic resin with no significant free monomer residual
- Clean removal method without damage to the flask
- Reduced energy costs

IMPORTANT NOTICE
Pack denture with the standard method trial pack using a manual or pneumatic press to a maximum of 200 PSI. Do not over tighten bolts. Tap flask with a wooden mallet only.

Pozzi® Acrylic Trimming Bur & Laboratory Carbide Burs

Acrylic Trimming Bur:

Specially designed for rapid reduction on acrylics. Cuts faster and stays sharper longer than any other conventional bur on the market. Will not clog. Taper-fissure type-one size only.

Laboratory Carbide Burs: For trimming, carving and finishing acrylic appliances. These carbide burs provide the ultimate in toughness and durability. Precision-ground grooves are razor sharp and assure resistance to gumming and clogging. All carbide burs, except Inverted Cone, feature cross-cut, chip-breaker blades. These carbide burs are now coated with gold titanium nitride (GTN) which makes them more durable.

Coated with gold titanium nitride for durability.

Pozzi Silicone Carbide Grinding & - Polishing Wheels for Multiple Uses

Multi Use

USE: For polishing natural and artificial teeth, filling materials, acrylics, porcelain, stainless steel and precious metals. Suitable for use up to maximum of 18,000 rpm. When working at low speeds the disc is quite flexible and can be used to polish and finish any inaccessible areas. When working at higher speeds, the discs naturally become less flexible and are used on larger occlusal and labial surfaces. Dry and wet polishing possible.

- A - Porcelain Grinding Wheel, 7/8" x 1/8"
- B - Porcelain Detail Grinding Wheel, 5/8" x 1/16"

The Pozzi stainless steel crown line is manufactured to meet the needs of all facets of dentistry. The posterior molar crowns are designed with a shallow occlusal anatomy, allowing for more healthy tooth structure after tooth reduction. The shallow occlusal cusps permit complete compatibility with opposing teeth and reduced cuspal interference during normal mastication. The crowns are parallel on the mesial and distal walls. Unlike bell-shaped crowns, these crowns will not rock or cause separation when two or more adjoining crowns are used. We have made these crowns with a thickness of 0.18 mm that prevents occlusal wear-through that sometimes occurs with the use of thinner crowns. Unlike some of the other crowns made with thinner and less durable

materials, our crowns may be welded too. These are the crowns you want for making space maintainers or Herbst appliances, or for a semipermanent restoration. Through our own research, we have determined these crowns to be of the ideal length: short enough to eliminate excess crown trimming, and long enough to provide optimum length and contour. To make our line complete to the user, we offer first and second primary molars, first and second permanent molars and first and second bicuspid. Pozzi Style 2000 crowns are a match for Unitek® Crowns. The Pozzi® Crown numbers and sizes are the same as Unitek®. Unitek® is not a trademark of American Tooth Industries.

Pozzi® Space Maintainers

These preformed components are available to the laboratory that chooses to form a custom band or crown space maintainer. You simply solder the tube to the band/crown, insert the maintainer rest into the tubing, and crimp it at the desired point. Your doctor can even do the crimping in the office, thereby eliminating any chance of misfitting.

Pozzi® Cobalt Clasp Crozat Wire (Medical Specification)

- Chromium cobalt alloy. Specifically designed for the Crozat method and for fabrication of the OSAYS appliance.
- Heat-treatable: May be soldered in open flame.
- Available in 15-23 gauge.
- Coiled spools. A softer, more malleable wire saves time when making intricate bends.

Pozzi® Standard Round Wire (Medical Specification)

- 3/4 hard wire for those who want more spring to their wire.
- Surgical-grade stainless steel.
- Spooled wire allows for increased tensile strength and less waste.

Pozzi Super Ball Clasps - Series 2000

This improved ball clasp is made of high-grade #304 stainless steel wire and accepts severe bends without fracturing. The round head is approximately twice the diameter of the wire shaft and will not irritate tissue. These clasps are made from diamond-drawn wire and have a bright, clean finish. In our opinion, other ball clasps on the market today have a lower tensile strength and an oval-shaped head that does not possess adequate retention required by retainers. If you are looking for a better ball clasp to give superior retention on your removable appliances, try the 2000 series.

Available in three sizes.

GROUP/ITEM #	DESCRIPTION	
013-19814	Ball Clasp 2000, Size .028, Pkg. 100 pcs.	\$38.78

Pozziloy (Medical Specification)

Pozziloy retainer wire, is our own special formulation of nickel cobalt wire, available in a blue, soft, heat-treatable (1400/1600 N/sq.mm) tensile. This chromium-cobalt base alloy is highly stainless and mechanically more resistant to breakage. Each wire is color coded blue at the tip, and is 14 inches in length. This wire is made from a vacuum-fused alloy, diamond-drawn to obtain leveled and highly resistant forces. Packaged in a ten pack, it is available in .028, .030, .032 and .036.

THE HISTORY OF POZZI ORTHODONTIC SILVER SOLDER

The Pozzi family has been manufacturing silver solders since 1934. From the melting of different alloys, including 65% of the purest silver, up to the making of rough bulk ingots, the quality control has been consistent, and the resulting product is remarkable. Of course, our solder does not have any cadmium or any other impurities. The rolling of the rough ingots to obtain square and round wires takes at least fifteen steps. The lamination is done with the most precise

gauged rolling mill in the industry. The high content of silver in our orthodontic solder means that very little material is needed in the soldering process, and the possibility of oxidation is nearly eliminated. Solders with a low silver content tend to oxidize heavily due to impurities. The combination of the ingredients in our silver solder and the high quality flux make this product the very best available in the world market.

Silver Solder

Pozzi® Malibu™ Orthodontic Laboratory Silver and Brazing Solder

Pozzi Special Guarantee and Maintenance Guide

Pozzi Stainless Steel Pliers are the best quality instruments your money can buy! Made from the highest grade stainless steel which affords you maximum cutting and gripping capacity. These quality pliers being highly resistant to corrosion, are designed to stand up to frequent sterilization procedures, both hot and cold. Our pliers and instruments are guaranteed to be free of defects in workmanship and materials or it will be replaced at our discretion free of charge. This guarantee is for a period of two years unless stated otherwise.

Instrument Care: To insure maximum life expectancy for your instruments, please follow these recommended care instructions. When cold sterilizing solutions are used, never leave instruments soaking overnight; 30 minutes is sufficient. Remove instruments and towel dry them immediately. As a precaution, it is recommended to air dry the screw joints carefully with compressed air.

Caution: To assure the adjustable screw joints or Internal Pin Joints do not get rusty, DO NOT ALLOW THE INSTRUMENTS TO SELF DRY!

When autoclaving instruments the temperature should never exceed 200° C or 392°F. Once sterilizing is complete, always towel and air dry as recommended in the cold sterilizing procedure.

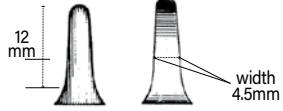

NOTE: We highly recommend applying a thin coat of silicon lubricant both to joints and tips at least once a week.

WARNING: At time of shipping from our warehouse, this product is NOT sterilized. If this product is to be used intraorally it MUST be sterilized by an approved method prior to use.

Reynolds

Curved shortened beaks.
Used in band forming and contouring.

GROUP/ITEM # DESCRIPTION
007-8-601-033 Reynolds 5" (13 cm)
\$98.54

Benson

Larger beaks than the Peeso. Used for band and crown stretching plus contouring.

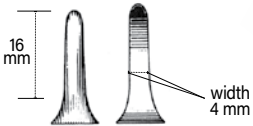

GROUP/ITEM # DESCRIPTION
007-8-601-052 Benson 6" (15 cm)
\$125.11

Gordon

Curved elongated beaks.
Used in band forming and contouring.

GROUP/ITEM # DESCRIPTION
007-8-601-035 Gordon 5" (13 cm)
\$92.77

Weingart

Precision ground tips assure a firm positive grip. The narrow beaks at the tip allow accessibility to all areas.

GROUP/ITEM # DESCRIPTION
007-8-602-000 Weingart 6" (15 cm)
\$109.24

How

Precision-serrated tips assure a firm, positive grip during use.

GROUP/ITEM # DESCRIPTION
007-8-602-005 How 5 3/4" (14.5 cm), straight **\$91.22**
007-8-602-006 How 5 1/2" (14.0 cm), curved **\$109.66**

Mathieu Hemostat Forcep Needle Holders

Positive locking ratchet allows instant opening and closing. Used by many orthodontists for twisting or tying ligature wire.

GROUP/ITEM # DESCRIPTION
007-8-605-914 Mathieu Needle Holder 5 1/2" (14 cm), standard **\$126.71**
007-8-605-915 Mathieu Needle Holder 5 1/2" (14 cm), narrow **\$127.56**

Broken Broaches Removing Pliers

Elongated and tapered tips for removing elastics from inaccessible areas.

GROUP/ITEM # DESCRIPTION
007-8-601-101 Broken Broaches Removing Pliers 5 1/2" (14 cm), curved **\$117.65**

Anterior Band Removing Pliers

Designed for the removal of anterior bands. Prevents danger of stretching or deforming the band. Comfortable for the patient without marring teeth.

GROUP/ITEM # DESCRIPTION
007-8-602-535 Anterior Band Removing Pliers 5" (13 cm) **\$90.59**

Posterior Band Removing Pliers

Extended jaw design allows the removal of posterior bands from inaccessible areas. Plastic tips are optional.

GROUP/ITEM #	DESCRIPTION
007-8-602-536	Posterior Band Removing Pliers 5 1/2" (13.5 cm) \$122.16

Johnson

Crimping and contouring pliers for bands, crowns and general use.

GROUP/ITEM #	DESCRIPTION
007-8-601-028	Johnson 5 1/2" (14 cm) \$95.78

Nance/Adams Clasp Pliers

Allows the technician to produce a nance or adams clasp quickly and efficiently.

GROUP/ITEM #	DESCRIPTION
007-8-601-034	Nance/Adams Clasp Pliers \$151.33

Anterior Direct Bond Bracket Remover

Wedging the tips under the bracket brace, allows for easy and efficient removal. Firm grip assures ease in horizontal use.

GROUP/ITEM #	DESCRIPTION
007-8-601-074	Anterior Direct Bond Bracket Remover \$114.16

Hemostat / Forcep Mosquito Tip Straight

Modules sit securely in the tip. Hemostat prevents crushing of the ligature.

GROUP/ITEM #	DESCRIPTION
007-8-605-005	Hemostat / Forcep Mosquito Tip Straight \$148.20

Hemostat / Forcep Mosquito Tip Curved

Provides easy access to posterior regions.

GROUP/ITEM #	DESCRIPTION
007-8-630-8014	Hemostat / Forcep Mosquito Tip Curved \$137.21

Hemostat / Forcep Mosquito Hook Tip

Hemostat has a recessed holding hook that prevents tearing of either the ligature or elastic.

GROUP/ITEM #	DESCRIPTION
007-8-605-004	Hemostat / Forcep Mosquito Hook Tip \$154.29

Rose Torquing Pliers

Rose Torquing Pliers wide with key .018 x .022. Designed to place torque in a specific section of archwire (single tooth) without distorting the remainder of the wire. The key is designed to torque the section between holding beaks - the torqued section will not extend past the contact points of the pliers beaks and will engage easily without transfer of torque to adjacent teeth. Labial torque and lingual torque can be placed next to each other with ease. Works with all arch wires.

GROUP/ITEM #	DESCRIPTION
007-OM-805W	Rose Torquing Pliers Wide with key \$126.79

Andresen

Use for precise bending and making loops for light wires.

GROUP/ITEM # DESCRIPTION
 007-8-601-060 Andresen 5 1/2" (14 cm)
\$105.67

Adams

Squared tips. The jaws are parallel at 1 mm opening.

GROUP/ITEM # DESCRIPTION
 007-8-601-043 Adams 5" (13 cm)
\$93.36

Angle Tweed Rectangular Arch Forming Pliers

Arch bending and torquing pliers. Non-slip parallel holding action on rectangular wire up to .025" x .208".

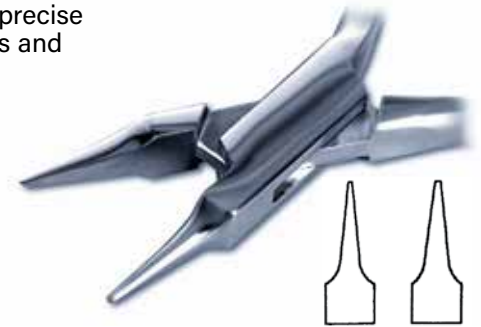

GROUP/ITEM # DESCRIPTION
 007-8-601-076 Angle Tweed Rectangular Arch Forming Pliers 5" (13 cm)
\$91.48

Wire & Clasp Bending Pliers

Elongated beaks for precise bending of light wires and clasps.

GROUP/ITEM # DESCRIPTION
 007-8-601-079 Wire and Clasp Bending Pliers 5 1/2" (14 cm)
\$102.40

Young

Wire bending pliers with 4-step beak.

GROUP/ITEM # DESCRIPTION
 007-8-601-064 Young 5" (13 cm)
\$136.61

Tweed Loop

Has narrow concave beak on one side with three step on the other side for use on round or edgewise wire up to .020".

GROUP/ITEM # DESCRIPTION
 007-8-601-070 Tweed Loop 5 1/2" (14 cm)
\$106.41

Aderer Three Pronged Pliers

Use for opening, closing and adjusting clasps.

GROUP/ITEM # DESCRIPTION
 007-8-601-040 Aderer Three Pronged 4 1/2" (12 cm)
\$108.55

Aderer

Same pliers as 007-8-601-040 with smaller and shorter tips.

GROUP/ITEM # DESCRIPTION
 007-8-601-048 Aderer Three Pronged 4 1/2" (11.5 cm)
\$94.99

Pozzi 3-Jaw Plier

For bending of Rapid Expander Arms, for wires up to 1.5 mm.

GROUP/ITEM # DESCRIPTION
 019-AP1034-00 3-Jaw Round Plier (Sand Finish)
\$51.75

Aderer

Arch bending pliers. Two types - 2 groove and 3 groove.

GROUP/ITEM #	DESCRIPTION
007-8-601-012	Aderer 5 1/2" (14.5 cm) 3 grooves \$98.49
007-8-601-024	Aderer 5 1/2" (14 cm) 2 grooves \$99.02

Waldron

Arch and spring bending pliers.

GROUP/ITEM #	DESCRIPTION
007-8-601-030	Waldron 5" (13 cm) \$93.43

Aderer Lingual Bar Heavy Face Bow

Three-pronged box joint pliers designed for the heavy bending of lingual bars, face bows and clasps. Heavy duty.

GROUP/ITEM #	DESCRIPTION
007-8-601-041	Aderer Lingual Bar (Heavy Face Bow) \$101.33

Jarabak

For precise bending of light wires. The three grooves ensure accurate bending and closing of loops.

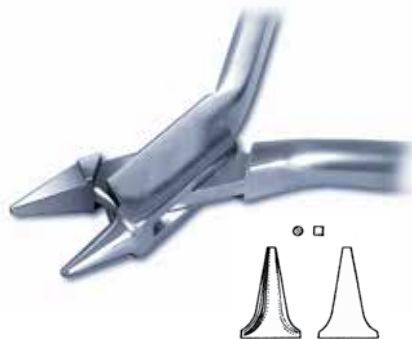

GROUP/ITEM #	DESCRIPTION
007-8-601-063	Jarabak 5 1/2" (14 cm) \$101.95

Bird Beak Pliers

Both round and flat beaks permit the bending of rectangular and round wire up to .030"

GROUP/ITEM #	DESCRIPTION
007-8-601-077	Bird Beak 5" (13 cm) \$111.73

Hollow Chop

For contouring round arch wires. Smooth beaks.

GROUP/ITEM #	DESCRIPTION
007-8-601-069	Hollow Chop 5 1/2" (14 cm) \$97.39

Lite Wire

Pliers designed for forming and bending up to .020" wire. Also for making and closing loops.

GROUP/ITEM #	DESCRIPTION
007-8-601-078	Lite Wire 5" (13 cm) \$105.05

Optical Pliers

Precision concave beaks for clasp and wire bending. Can be used on both round and edgewise wire to bend to exacting measurements.

GROUP/ITEM #	DESCRIPTION
007-8-601-071	Optical 4 3/4" (13 cm) \$91.36

Schwarz

Light wire, small optical pliers with concave beaks.

GROUP/ITEM #	DESCRIPTION
007-8-601-067	Schwarz 5" (13 cm) \$93.51

Wire Bending Pliers

Precision round and concave beaks for clasp and wire bending. Can be used on both round and edgewise wire up to .040.

GROUP/ITEM #	DESCRIPTION
007-440	Wire Bending Pliers \$134.41

Clasp Bending Pliers

GROUP/ITEM # DESCRIPTION
 007-442 Clasp Bending Pliers
\$136.34

Heavy Duty Waldsachs

General forming and bending pliers. Heavy duty.

GROUP/ITEM NO. DESCRIPTION
 007-443 Cutting Pliers, Waldsachs
\$139.21

Heavy Duty Wire & Plate Scissors

GROUP/ITEM # DESCRIPTION
 017-437 Heavy Duty Wire and Plate Scissors
\$83.19

Scissors And Cutters

Universal collar and crown scissors. For cutting bands and soft wire.

GROUP/ITEM # DESCRIPTION
 007-8-604-046 Crown Scissors, Smooth Edge
 4 1/2" (12 cm), Straight
\$89.52

007-8-604-047 Crown Scissors, Smooth Edge
 4 1/2" (12 cm), Curved
\$97.39

007-8-604-046

Lab Cutting Pliers

Designed to cut lab wires up to 0.040".

GROUP/ITEM # DESCRIPTION
 007-8-603-091H Lab Cutting Pliers
\$309.36

Pin & Ligature Wire Cutter

Special carbide steel blades assure accurate, dependable cutting edges. Perfect for cutting lock and key pins. Stainless steel. Cuts soft wire up to .010". Do not use on hard wire.

GROUP/ITEM # DESCRIPTION
 013-19790 Pin and Ligature Wire Cutter
\$137.95

Wire Cutting Pliers

Designed to cut lab wire up to 0.040".

GROUP/ITEM # DESCRIPTION
 007-8-603-092 Wire Cutting Pliers
\$110.23

Hemostat has a recessed holding hook that prevents tearing of either the ligature or elastic.

GROUP/ITEM # DESCRIPTION
 007-8-605-004 Hemostat / Forcep Mosquito Hook Tip
\$154.28

Ligature Wire Cutter

Designed to clip metal ligatures.

GROUP/ITEM # DESCRIPTION
 007-8-603-093 Ligature Wire Cutter
\$107.50

Heavy Duty Lab Pliers

Designed to cut lab wire up to 0.032".

GROUP/ITEM # DESCRIPTION
 007-8-603-096 Heavy Duty Lab Pliers
\$135.94

We wanted to manufacture a pliers like the ones you used to be able to buy in the old days - without having to mortgage the farm!

We feel that once you use one of these pliers you will know why it is a real classic!

All of the "Classika" instruments are made of corrosion resistant stainless steel. All "Classika" cutting instruments have tool steel inserts. All "Classika" cutting instruments have diamond-honed cutting edges and have a hard chrome finish. They withstand all accepted methods of sterilization.

All "Classika" instruments have a balanced assembly wobble-free sliding lock joint. No more shim joints to deal with. All come with extended "sure grip" handles and are guaranteed to be free from manufacturing defects. Any instrument that proves defective in workmanship and materials will be repaired or replaced at our discretion free of charge. All instruments carry a two year warranty.

Black Hard Wire Cutter

Specially designed for cutting hard wires. The cutting angle is 15 degrees and the cutting edges have been diamond-honed to allow hard wire cutting. Maximum cutting capacity is .20 diameter in hard wire.

GROUP/ITEM # DESCRIPTION
040-40-0015 Black hard wire cutter
\$181.19

Flush Cut Distal End Cutter with Safety Hold

The particular design of this cutter allows distal end arch wires to be cut in the patient's mouth safely. It cuts wire and then "safety holds" the loose wires.

Maximum cutting capacity: rectangular wire up to .022x.028" (0,56x0,71mm); round wire up to .020" (0,51mm); twist wire up to .016" (0,41mm) in diameter.

GROUP/ITEM # DESCRIPTION
040-40-0017R Distal end cutter
\$181.19

Miniature Pin & Ligature Cutter

This standard pin cutter is non-angled and designed to cut soft wires. This pliers is very popular for chairside work. Maximum cutting capacity is .015 in soft wire.

GROUP/ITEM # DESCRIPTION
040-40-0016 Miniature pin and ligature cutter
\$181.19

Micro-Miniature Light Wire Cutter with Stop Screw

This pliers is designed as a miniature ligature cutter that will cut soft wire. It easily reaches those hard-to-reach areas in the mouth. It has a factory adjusted stop screw that prevents tip damage due to overscrewing the cutter during routine procedures. Maximum cutting capacity is soft wire up to .012 in diameter.

GROUP/ITEM # DESCRIPTION
040-40-0018 Micro-Miniature cutter
\$181.19

15° Pin & Fine Wire Cutter

The tip is angled 15 degrees for better field vision. The tooled steel inserted tips have backing ledges for greater strength. Maximum cutting capacity is .015 diameter for both soft and hard wire.

GROUP/ITEM # DESCRIPTION
040-40-0014 15 degree pin and fine wire cutter
\$181.19

Stainless Steel Crown Cutting Tools

Small Straight Scissors

Use for trimming anterior crowns.

GROUP/ITEM #
040-40-0028
\$140.28

Tube Crimping Pliers

Used to crimp the tube around a space maintainer wire. It can also be used for placing stops and tubing on arch wires.

GROUP/ITEM #
040-40-0033
DESCRIPTION
Tube Crimping Pliers
\$246.93

Stainless Steel Crown Pliers

Small Crown Crimping Pliers

This tool is handy for anterior crowns and smaller sizes in the primary molars.

GROUP/ITEM #
040-40-0031
\$246.93

Regular Crown Crimping Pliers

This is the standard in the industry for all posterior crowns.

GROUP/ITEM #
040-40-0030
\$246.93

Crown Contouring Pliers

For adding contour to the crown for a better fit.

GROUP/ITEM #
040-40-0032
\$246.93

Mini-Distal End Cutter

Smaller than standard. Cuts and holds in one operation.

GROUP/ITEM # DESCRIPTION
007-8-603-090H Mini-Distal End Cutter
\$239.68

Posterior Direct Bond Bracket Remover

Direction provides easy access to confined posterior areas. Easy vertical removal.

GROUP/ITEM # DESCRIPTION
007-8-601-075 Posterior Direct Bond Bracket Remover
\$145.80

Boynton-style Elastomeric Pliers

Features a smaller head with narrower arms for easier access to the posterior. An ideal alternative multiple use tool for the Crown & Bridge and Ceramics department.

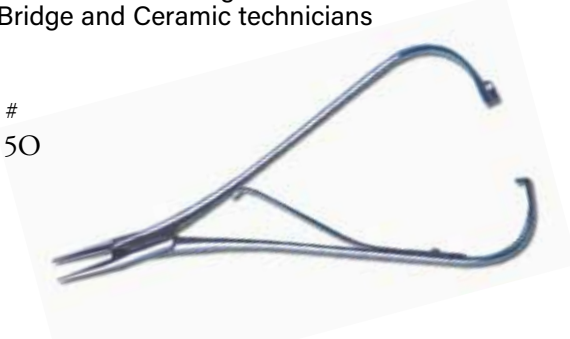

GROUP/ITEM #
007-8-028-125
\$165.80

Mathieu Needle Holder

Positive locking ratchet allows instant opening and closing. Used by many orthodontists for twisting or tying ligature wire. An excellent general use instrument for Crown & Bridge and Ceramic technicians worldwide.

GROUP/ITEM #
007-8-605-915O
\$127.56

V-Stop Bend Pliers

Forms a 1 mm high V bend automatically. Used to shorten arch wires or to place a strategic stop in the arch wire, such as the midline, which avoids any unwarranted displacement of the archwire. Used by laboratories for wrought wire modifications in transitional partials.

For wires up to .025".

GROUP/ITEM #
007-8-601-045
\$121.36

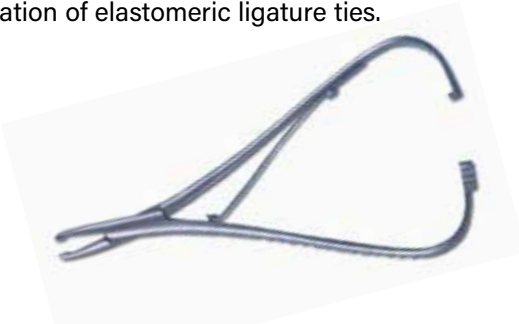

Prolong Flat Nose Pliers

Serrated

Similar to a standard Mathieu except the tips are ultra fine to facilitate application of elastomeric ligature ties.

GROUP/ITEM #
007-8-605-125
\$129.52

Side Cutter Pliers - Heavy Duty

Heavy duty pliers designed to cut wire up to .040"

GROUP/ITEM #
007-8-603-096H
\$221.96

Mathieu Needle Holder

Short Beak

General detail serrated utility pliers for detail work 6" - 15cm

GROUP/ITEM #
007-8-601-015
\$88.60

Side Cutter Pliers

Will cut up to .020" round wire. Features dual reciprocal springs for a lighter touch and less hand fatigue.

GROUP/ITEM #
007-8-603-098H
\$112.55

Pozzi Special Guarantee

Pozzi pliers and instruments are guaranteed for a period of two years from date of purchase to be free from defects in workmanship and/or materials. Any product that proves defective in workmanship and materials will be repaired or replaced, at our discretion, free of charge.

Unbreakable™

Thermoplastic Comfort Systems (tcs®)

tcs unbreakable partials are fabricated from a strong and durable biocompatible nylon thermoplastic. tcs unbreakable may be used whenever you are considering a removable partial denture for your patient. tcs unbreakable gives you the option of offering your patients a restoration with flexibility, strength, and aesthetics.

Some benefits included:

- Color stable
- Ideal for combo partials
- Lifetime warranty against breakage
- Will not warp or become brittle
- Made in the U.S.A.

Karadent™

Karadent™ was introduced to the market in 2016.

It is a semi-rigid microcrystalline polymer for full dentures, semi-flexible partial dentures, clear clasps, frameworks & nightguards.

- No volume shrinkage - exceptional fit
- Minimal water absorption
- An upgrade from acrylic dentures
- Quick and easy to finish and polish (similar to acrylic)
- Easy to repair, rebase, and relin with acrylic (laboratory procedure using fusing liquid)
- Monomer free and hypoallergenic
- BPA free
- Available in 2 translucent shades

108-4116	Crucible complete with cemented ceramic container and lid cover	\$58.83

CERAMIC CRUCIBLE

For Chrome-Cobalt-Molybdenum Alloy. Suitable for all old machine models. Smaller Capacity (45 grams).

GROUP/ITEM #	DESCRIPTION	
108-3606	Ceramic Crucible	\$10.38

We also have parts for CMP Industries LLC casting machines please inquire with ATI.

Shining Box

DENTURE POLISHING STATION

SHINING BOX is a complete cabinet developed for grinding and polishing operations under full safety conditions on metals and other materials currently used in the dental field.

The hood has been designed and constructed with the aim to protect the user against any projection of fluids and dust particles and to extract and filter the residues. Configuration of the polishing unit provides for dual speed settings: at low medium speed (1.400 rpm) when removing particles on metals without overheating in excess the surfaces and medium-high speed (2.800 rpm) for excellent polishing effect. The conic tips can accommodate abrasive wheels, brushes and fabric discs.

The highest safety during operation is assured by the adoption of an electromagnetic switch which prevents the unit from starting up accidentally after a voltage drop or lack of current. In addition, we recommend to wear specific individual safety protection devices as goggles, gloves and mask to preserve your eyes from any slag rebounds, your hands from touching accidentally the parts in motion and your respiratory tract from inhaling dust particles.

TECHNICAL FEATURES

Speed: 1,400/ 2,800 rpm

Absorption: 300W

Suction power: 500 mc/h

Noise level: >70 dBA

Lighting: LED

Overall dimensions: mm 730x 500x 580 H

Total Weight: 49 kg

109-A5250	Denture Polishing Station 110V	\$6,508.68	\$5,500.00

BASE 3

The **BASE 3** is the most popular and successful model of the entire and wide range of sandblasters that Dentalfarm has ever manufactured. It is a complete blasting center consisting of:

- one working chamber for the coarse aggressive corundum used to remove investment, propelled by a powerful, recycling projector.
- two disposable microblasting **EASY** tanks for use with aluminum oxide or polishing microbeads.

The standard range already incorporates the necessary instrumentation and controls, recently implemented by a new LED white lighting system.

TECHNICAL FEATURES

Recycling blasting system: devesting projector fitted with 1x0 3.0 mm nozzle.

Microblasting tanks: two (**EASY** version)

Available nozzles: 0.8 mm for grainsize from 75 to 95µ; 1.2 mm from 95 to 110µ; 0.5 mm for 50µ; 2.0 mm for 250µ

Optional connection to an electric extractor (PRD-3 or PRD-3 SHAKE) or to the Dentalfarm WAFI.S. solution

Working pressure: from 2.5 -6.0 BAR (devesting) from 1.5 -5.0 BAR (micro blasting)

Overall dimensions: 415x400x415mm

Blasting chamber volume: 22 l

Weight: 11.8 kg

GROUP/ITEM #	DESCRIPTION	RETAIL PRICE	SPECIAL PRICE
109-A10723	All-in-one blasting center	\$2,286.68	\$1,652.13

MICRA 2

Microblaster standard fitted with two microblasting tanks for aluminum oxide or micro glassbeads for final polishing. The working chamber provides for a collection compartment for disposable abrasive products, separated by a filtering grate. The front large viewing section is fully transparent allowing for greater visibility inside the blasting chamber. Totally integrated unit which accommodates the necessary instrumentation and controls providing for ideal operation, now implemented by a new LED lighting system.

MICRA 2 offers the feasibility of two different connections for the suction systems: an upper intake to collect dust particles only, and a lower intake to collect both dust and used abrasive material. The MICRA EVO and EVO D.O.S. versions can be upgraded to up to 4 **EASY** and D.O.S. tanks.

TECHNICAL FEATURES

Microblasting tanks: 2 (**EASY** version)

Available nozzles: 0.8 mm for grainsize from 75 to 95µ; 1.2 mm from 95 to 110µ; 0.5 mm for 50µ; 2.0 mm for 250µ

Operation: electric foot-control and selector switch

Hand sleeves: high sensitivity latex gloves

Optional connection to an electric extractor (PRO-3 or PRO-3 SHAKE) or to the Dentalfarm W.A.F.I.S. solution

Working pressure: 1.5 – 5.0 BAR

Overall dimensions: 410x385x415mm

Blasting chamber volume: 24 l

Weight: 11 kg

GROUP/ITEM #	DESCRIPTION	RETAIL PRICE	SPECIAL PRICE
109-A10732	Finishing microblaster	\$2,180.22	\$1,575.21

MINIEXPORT

Vibrator for plaster and investment, featuring a rectangular plate. The vibration is perfectly vertical without any dispersion thanks to 4 shock absorbers and special large suction feet providing uniform vibration. Intensity and width of movement of the plate are controlled by a circuit board fitted with a potentiometer.

All components are soaked in resin in order to assure the highest stability and insulation. The rubber plate is easily removable for cleaning. MINIEXPORT is ideal for small dental labs.

Plate size: 240x150x105mm

It accommodates 2 large cylinders (9x).

Weight: 5,5 kg

GROUP/ITEM #	DESCRIPTION	RETAIL PRICE	SPECIAL PRICE
109-A0125	Electronic regulation capacity 2 chrome rings	\$ 628.23	\$453.90

EXPORT 2

Vibrator for plaster and investment, featuring a rectangular plate. Four corner post construction provides uniform vibration to all points of the tray allowing full use of the table area. Perfect stability is assured by special suction feet. Intensity and width of movement of the plate are controlled by a circuit board operated by a potentiometer. All components are soaked in resin in order to assure the highest stability and perfect insulation. The rubber plate is easily removable for cleaning. EXPORT 2 is ideal for large workload dental labs.

Plate size: 365x265x110 mm

It accommodates 6 large cylinders (9x).

Weight: 10,5 kg

GROUP/ITEM #	DESCRIPTION	RETAIL PRICE	SPECIAL PRICE
109-A0127	Electronic regulation capacity 6 chrome rings	\$ 865.17	\$625.08

MAXIEXPORT

Vibrator for plaster and investment, featuring a very large rectangular plate. The vibration is perfectly vertical and without any dispersion thanks to 3 combined electromagnetic units and 8 shock absorbers assuring uniform vibration all over the plate. Large suction feet provide for stable operation. Intensity and width of movement of the plate are controlled by a circuit board operated by a potentiometer. All components are soaked in resin in order to assure the highest stability and perfect insulation. The rubber plate can be easily removed for cleaning purposes. MAXIEXPORT is ideal for large model casting dental labs.

Plate size: 600x400x130 mm

It accommodates 18 large cylinders (9x).

Weight: 24,7 kg

GROUP/ITEM #	DESCRIPTION	RETAIL PRICE	SPECIAL PRICE
109-A0129	Electronic regulation capacity 18 chrome rings	\$ 1,630.20	\$1,177.82

PHOTO-FLASK

Transparent and made of removable sections, PHOTO-FLASK is a practical device designed to handle the light-curing composites without any modification of the standard operating working procedure. PHOTO-FLASK is made by transparent elements ensuring a better exposure to UV rays. No reinforcement metallic plates are needed.

GROUP/ITEM #	DESCRIPTION	RETAIL PRICE	SPECIAL PRICE
109-PHF	Flask for light-curing units	\$ 359.38	\$259.65

PHOTOPOL PRO

Photopol Pro is a light-curing unit which best suits with most composites sensitive to UV light. 3 extremely powerful circuits and 8 LED UV at different frequency assure the overall radiation. Both the working chamber and the horizontal plate are coated with highly reflecting material assuring a mirror effect with no dispersion of ultraviolet rays. The support plate is steadily rotating and it has been conveniently assembled on a sliding drawer allowing to position and to pick up easily the elements to be treated.

TECHNICAL FEATURES

Two circuits of 8 LED each covering the higher UV spectrum (above 410nm-blue)

Useful "Step Mode" to dry out and fix different layers (operation lasting few seconds, repeated in steady succession)

One circuit of 8 LED covering the lower UV spectrum (under 410nm - violet)

Rotating turntable working under continuous cycle to assure the all-over exposure of the elements restricting the shade effect.

Adjustable irradiation power to avoid any shock to the material

Plate size: 100x100 mm

Ideally suited to perform light-curing to any composite available in the dental field.

Dimensions: 280x350x300 mm

Weight: 8.5 kg

GROUP/ITEM #	DESCRIPTION	RETAIL PRICE	SPECIAL PRICE
109-A5407	UV light-curing unit for composites	\$ 3,127.90	\$2,259.91

IDEA

IDEA represents the utmost achievement in developing the design of the new range of sandblasters. This high-point combines the reliability of a brand like Dentalfarm, the ergonomics of the design and the modularity of the models available. The particular structure of the machine facilitates a comfortable position and assures the best angle of impact for the abrasive jet even when the user is in a seated position. The wide visibility over the entire workspace and the powerful lighting of natural color allows to perform very accurate finishing operations. The unique pointed jet will grant the maximum efficiency whilst limiting product consumption.

The possibility of adopting the heated D.O.S. (Dry Oxide System) tanks represents the best solution to problems originated by insufficient smoothness, especially for very fine abrasive powders. The sandblaster can be customized in both the number and pattern of containers (from two to four D.O.S or EASY tanks) and the type of dust extraction system (external electric or built-in pneumatic).

GROUP/ITEM #	DESCRIPTION	RETAIL PRICE	SPECIAL PRICE
109-A1077	Finishing microblaster	\$2,981.48	\$2,154.12

IDEA PRO

IDEA PRO is the response to the demand of every qualified dental laboratory. A multi-function solution that incorporates both devesting and finishing in the same unit featuring a design which avails of the latest technical solutions.

The entire working process embodied in a single unit: a preliminary stage of fast and powerful devesting and a second stage of careful and precise finishing.

The rationalization of space and the location of the tools allows to perform easily all blasting operations in the same working chamber.

This hybrid version has a very powerful jet that provides the recycled corundum for devesting and a variable number of tanks for the finishing micro abrasives. The working chamber is equipped with LED lighting and separated from the collection tank by a fixed grid that prevents debris from mixing with the stored sand.

GROUP/ITEM #	DESCRIPTION	RETAIL PRICE	SPECIAL PRICE
109-A1076	All-in-one blasting center	\$3,111.92	\$2,248.36

AMERICAN TOOTH INDUSTRIES MISSION STATEMENT & QUALITY POLICY

Our family of brands—Justi, Pozzi, Major, and Regal—carries an old motto of our company, "Simple inventions last forever." Using the tools of their forebears, the human eye and hand, our craftsmen carry on the American Tooth Industries' tradition of excellence. We are delivering quality products at a fair market value, and we shall continue to do so.

BUY AMERICAN MADE

High Quality Hardened Plastic Teeth at Affordable Prices.

**American Tooth Industries is now
the ONLY Tooth Manufacturer in the USA**

Justi has been proudly manufacturing Hardened Plastic Teeth for over 159 years in the US in an FDA Registered facility and continues to do so today.

We have one of the largest tooth inventories in North America with over 6 million sets in stock.
